STRONGER IN EVERYWAY

PRODUCT GUIDE SECURITY PANEL FENCE

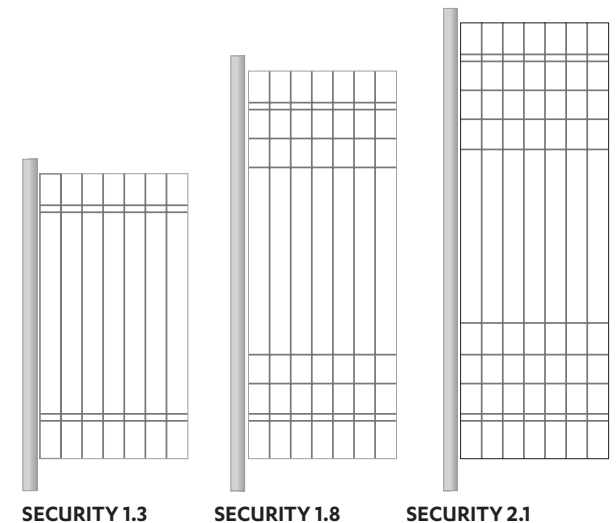

Hurricane fence panels are an attractive slimline profile offering a strong and safe fencing system.

Standard fold top detail (top and bottom).

SECURITY PANEL FENCE

For over 80 years Hurricane has provided a range of high quality, hard wearing products made to last in New Zealand's harsh environment.

Designed for those locations where visual appeal and integrity of access share equal importance. The strong rigid panels integrate well into urban and rural settings.

The simple but effective method of erection provides flexibility to suit a range of requirements and surroundings. Although galvanised RHS is commonly used as a support post, the panels can be just as readily attached to wooden posts, brick pillars, concrete or any building surface.

All Hurricane safety panels feature an anti-scaling gap of vertical rods without horizontal hand or foot holds to present the maximum deterrent to climbers. Extensive use has been made of Hurricane security panel fences to isolate motorways and high flow intersections from pedestrian access. The robust construction and hot-dip galvanised finish ensure many years of faultless service, however, in the event of Hurricane security panel fences being damaged, simplicity of replacement ensures restoration of security with a minimum of delay.
